MAGRUDER
Fertilizer Check Sample Program
www.magruderchecksample.org

Instructions for supplying product to be
used for the Magruder Check Samples:

Magruder samples are identified by a series of numbers indicating the year and month the samples are sent for analysis. For example the February 2007 sample will be labeled Magruder 2007-02 etc.

In order to have sufficient material for preparation and distribution it is necessary to send at least 50 lbs. of dry or 5 gallons of liquid product. The most frequent means of shipping has been UPS and Federal Express.

Samples should be clearly labeled with the MAGRUDER number and fertilizer grade. They should be shipped at least two months prior to the sample date; for example sample 2007-10 should be shipped no later than the last week of July 2007. You may ship the sample, as far in advance as you wish unless it is a liquid, which may be affected by prolonged storage. With the sample, please send to Able Laboratory, an MSDS, a cover letter notifying of shipment, and when possible, an ingredient list or derived from statement.

Indicate in the cover letter any analyses that are to be performed in addition to the routine values covered by the grade.

Samples are to be shipped to:

Able Laboratory, Inc.
Attn: Magruder Sample Preparation
1886 Fern Hill Road
Pikeville, TN 37367
